Table of Contents

1. Installation	2
2. Configuration and Activation of ModelRisk	6
2.1. Configuration.....	6
2.2. Activation	6

1. Installation

Follow the steps below to install ModelRisk:

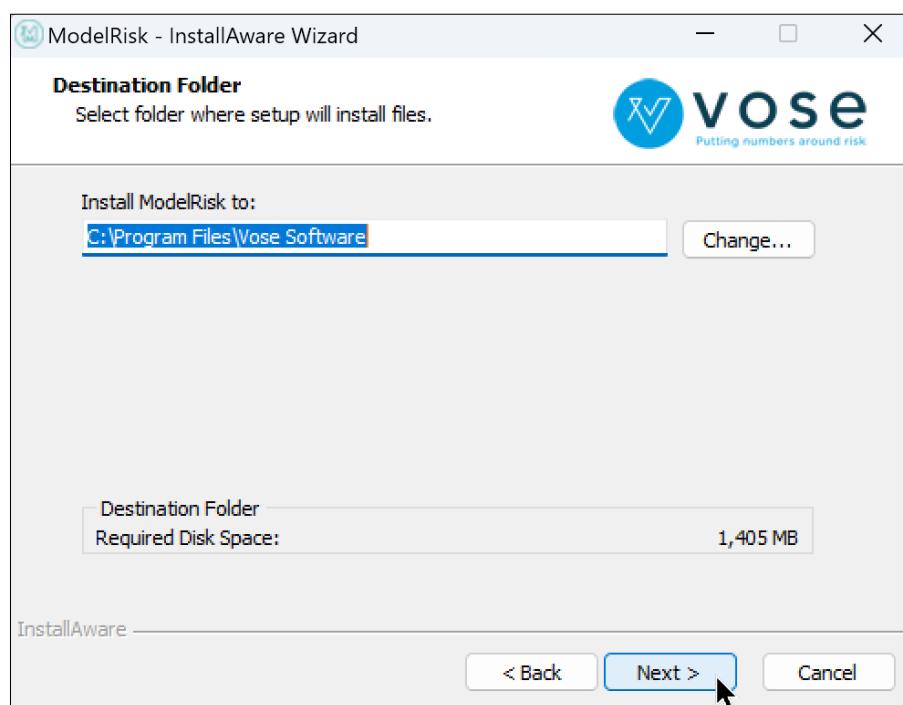

1. Go to the Vose Software website www.vosesoftware.com and download the ModelRisk setup file
2. Make sure that Microsoft Excel is not currently running on your computer and, if possible, that you are connected to the Internet. Go to the folder where the setup file modelrisksetup.exe is located (usually the ‘Downloads’ folder) and - **VERY IMPORTANT** - right-click the file. Select “Run as... Administrator” to make sure you’re installing the setup file with administrative rights.
3. The setup procedure will begin. Click the Next button on two screens:

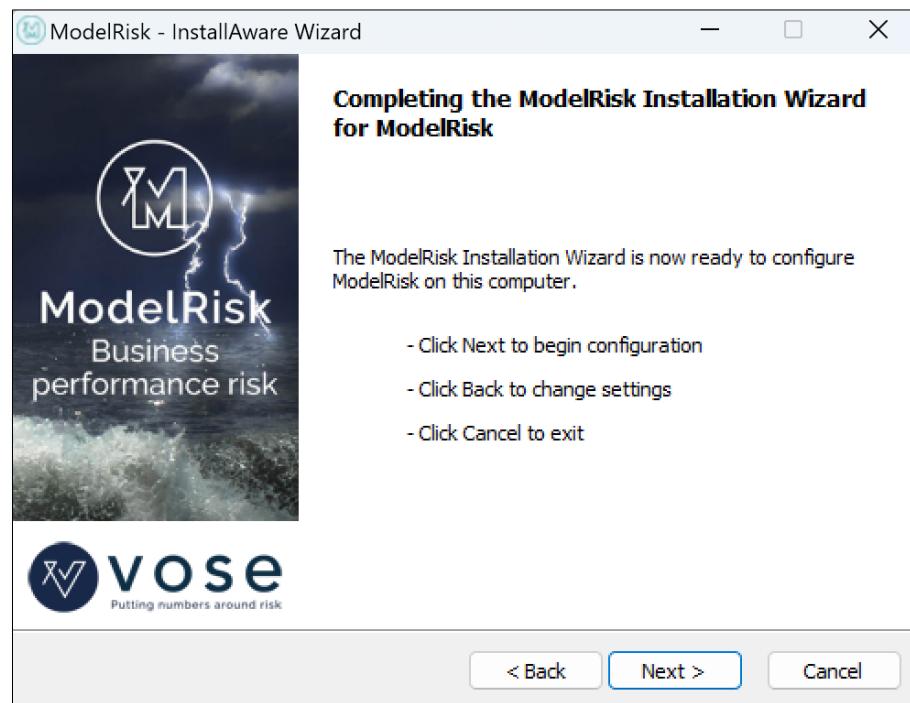

4. Read carefully the license agreement and select "I accept the terms of the license agreement". Click Next:

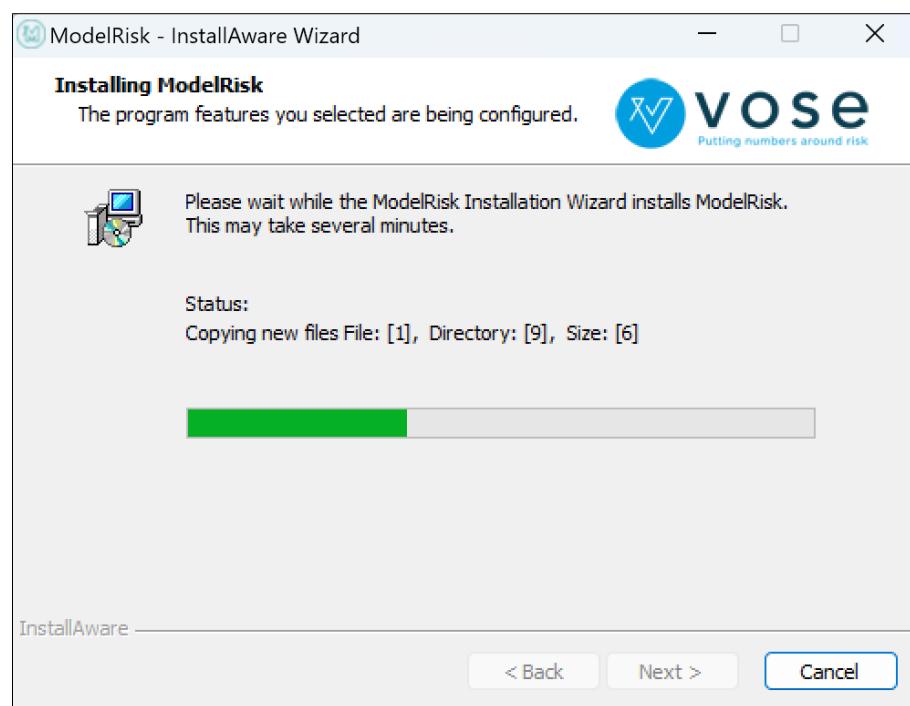

5. Select the installation folder. By default, the installation procedure will create the folder C:\Program Files\Vose Software. Click Next:

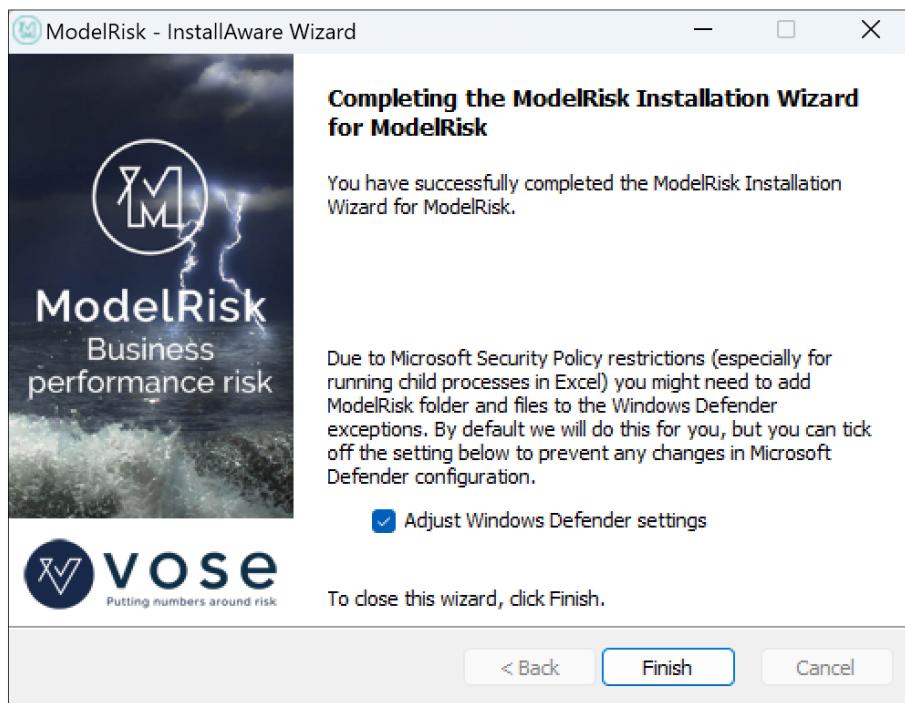

6. Click Next to confirm the installation:

7. ModelRisk will start copying the files into the installation folder:

8. Click Finish to exit the installation:

Microsoft Windows Defender has very strict security policies for Microsoft Excel add-ins. These restrictions can lead to unstable application behavior and affect user experience. To prevent this from happening we recommend you to keep the “Adjust Windows Defender settings” checkbox switched on.

Note:

Behind the curtain this checkbox simply allows us to run standard script which includes ModelRisk application directory and files into Microsoft Defender exclusions list.

If you want to do this manually, you can turn the checkbox off, finish the installation and run 'run_unlock_winefender.bat' from application folder (by default C:\Program Files\Vose Software\ModelRisk). A full list of script instructions is available in 'unlock_in_winefender.ps1' file.

9. You can check that ModelRisk is installed by launching ModelRisk (All Programs → Vose Software → ModelRisk → ModelRisk). ModelRisk will add a ribbon in Microsoft Excel called “ModelRisk”.

2. Configuration and Activation of ModelRisk

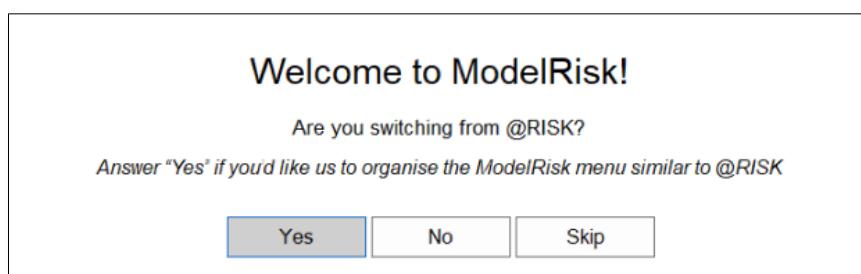

2.1. Configuration

When ModelRisk is launched for the first time, it shows several screens which allow user to configure ModelRisk initial appearance:

Language selection window

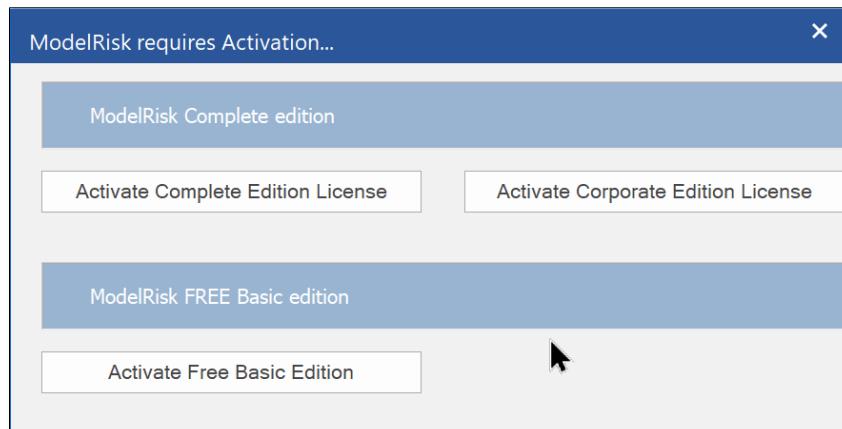

Ribbon configuration wizard

2.2. Activation

The final step is to activate your copy of ModelRisk

2.2.1. Activating Free Basic edition

Click ‘Activate Free Basic Edition’ and copy-paste the code (which is received after submitting registration data on Vose Software website) in the input field and click the OK button. This will unlock the ModelRisk Complete Edition Trial for 15 days, after that you will be automatically switched to FREE Basic edition for a period of 180 day. You can request the code again from

 [ModelRisk - Risk Analysis Add-In for Excel | Download FREE Trial
\(vosesoftware.com\)](http://www.vosesoftware.com)

2.2.2. Activate Complete Edition License

If you have purchased a license of ModelRisk Complete, you should have received a License Key from Vose Software. You can activate it by clicking ‘Activate Complete Edition License’ button or by running License Manager (this process described in the  [License Manager Manual](#))
